About panel usage

Decorative wooden wall cladding panels are made of natural wood, so their use in wet areas is not recommended. Panels in the bathrooms can be used only in places which have no direct exposure of water.

Wooden panels are a natural product, which is marginally subjected to the current climate exposure. For this reason, we recommend before the application of the panel on the wall to keep for 1-2 days panels out of the package in rooms where they are planned to be used.

We recommend using mounting adhesive to apply panels to the surface. Choosing adhesive you should note adhesive manufacturer's instructions about the surface You plan to use for panels.
